

Deployment Guide for 2025

This document provides a comprehensive deployment guide for deploying and managing applications

Table of Contents

1. Prerequisites
2. Infrastructure Setup
3. Kubernetes Cluster Deployment
4. Application Deployment
5. Continuous Integration & Continuous Deployment (CI/CD)
6. Monitoring & Alerting
7. Best Practices & Security
8. Troubleshooting
9. References

1. Prerequisites

- **Operating System:** Ubuntu 22.04 LTS
- **Tools & Services:**
 - Kubernetes (k8s) cluster (managed or self-hosted)
 - GitHub repository for source code
 - GitHub Actions for CI/CD
 - ArgoCD for GitOps-based deployment
 - Monitoring tools (Prometheus, Grafana, Alertmanager)

2. Infrastructure Setup

2.1. Prepare Ubuntu 22.04 Hosts

- Ensure all nodes are updated:

```
```bash
sudo apt update && sudo apt upgrade -y
```
```
- Install necessary dependencies:

```
```bash
```

```
sudo apt install -y apt-transport-https ca-certificates curl
```
```

2.2. Set Up Kubernetes Cluster

- Use tools like **kubeadm**, **Rancher**, or managed services (EKS, AKS, GKE).
- Example: Installing kubeadm on Ubuntu 22.04

```
```bash
```

```
curl -s https://packages.cloud.google.com/apt/doc/apt-key.gpg | sudo apt-key add -
sudo apt-add-repository "deb http://apt.kubernetes.io/ kubernetes-xenial main"
sudo apt update
sudo apt install -y kubelet kubeadm kubectl
sudo apt-mark hold kubelet kube
```

8. Troubleshooting
9. References

1. Prerequisites

- **Operating System:** Ubuntu 22.04 LTS
- **Tools & Services:**
 - Kubernetes (k8s) cluster (managed or self-hosted)

- GitHub repository for source code
- GitHub Actions for CI/CD
- ArgoCD for GitOps-based deployment
- Monitoring tools (Prometheus, Grafana, Alertmanager)

2. Infrastructure Setup

2.1. Prepare Ubuntu 22.04 Hosts

- Ensure all nodes are updated:

```
```bash
sudo apt update && sudo apt upgrade -y
```
```
- Install necessary dependencies:

```
```bash
sudo apt install -y apt-transport-https ca-certificates curl
```
```

2.2. Set Up Kubernetes Cluster

- Use tools like **kubeadm**, **Rancher**, or managed services (EKS, AKS, GKE).
- Example: Installing kubeadm on Ubuntu 22.04

```
```bash
curl -s https://packages.cloud.google.com/apt/doc/apt-key.gpg | sudo apt-key add -
sudo apt-add-repository "deb http://apt.kubernetes.io/ kubernetes-xenial main"
sudo apt update
sudo apt install -y kubelet kubeadm kubectl
sudo apt-mark hold kubelet kube
```

  - ArgoCD for GitOps-based deployment
  - Monitoring tools (Prometheus, Grafana, Alertmanager)

---

## ## 2. Infrastructure Setup

### ### 2.1. Prepare Ubuntu 22.04 Hosts

- Ensure all nodes are updated:

```
```bash
sudo apt update && sudo apt upgrade -y
```
```
- Install necessary dependencies:

```
```bash
sudo apt install -y apt-transport-https ca-certificates curl
```
```

### ### 2.2. Set Up Kubernetes Cluster

- Use tools like **kubeadm**, **Rancher**, or managed services (EKS, AKS, GKE).
- Example: Installing kubeadm on Ubuntu 22.04

```
```bash
curl -s https://packages.cloud.google.com/apt/doc/apt-key.gpg | sudo apt-key add -
```

```
sudo apt-add-repository "deb http://apt.kubernetes.io/ kubernetes-xenial main"
sudo apt update
sudo apt install -y kubelet kubeadm kubectl
sudo apt-mark hold kubelet kube
# Deployment Guide for 2025
```

This document provides a comprehensive deployment guide for deploying and managing applications

Table of Contents

1. Prerequisites
2. Infrastructure Setup
3. Kubernetes Cluster Deployment
4. Application Deployment
5. Continuous Integration & Continuous Deployment (CI/CD)
6. Monitoring & Alerting
7. Best Practices & Security
8. Troubleshooting
9. References

1. Prerequisites

- **Operating System:** Ubuntu 22.04 LTS
- **Tools & Services:**
 - Kubernetes (k8s) cluster (managed or self-hosted)
 - GitHub repository for source code
 - GitHub Actions for CI/CD
 - ArgoCD for GitOps-based deployment
 - Monitoring tools (Prometheus, Grafana, Alertmanager)

2. Infrastructure Setup

2.1. Prepare Ubuntu 22.04 Hosts

- Ensure all nodes are updated:

```
``bash
```

```
sudo apt update && sudo apt upgrade -y
---
```

- Install necessary dependencies:

```
```bash
sudo apt install -y apt-transport-https ca-certificates curl
```
```

2.2. Set Up Kubernetes Cluster

- Use tools like **kubeadm**, **Rancher**, or managed services (EKS, AKS, GKE).
- Example: Installing kubeadm on Ubuntu 22.04

```
```bash
curl -s https://packages.cloud.google.com/apt/doc/apt-key.gpg | sudo apt-key add -
sudo apt-add-repository "deb http://apt.kubernetes.io/ kubernetes-xenial main"
sudo apt update
sudo apt install -y kubelet kubeadm kubectl
sudo apt-mark hold kubelet kube
```
