

## # Incident Postmortem

### ## Incident Overview

On October 20, 2023, our service experienced an unexpected outage affecting user login function

---

### ## Timeline

- **10:15 AM**: Monitoring team detects multiple failed login attempts via monitoring dashboard
- **10:20 AM**: Support team receives reports from users unable to log in. Incident is escalated
- **10:30 AM**: Engineering begins preliminary analysis. Logs indicate database connection error
- **10:45 AM**: Confirmed that the authentication service is failing to connect to the user database
- **11:00 AM**: Investigation reveals that the database server has become unresponsive.
- **11:15 AM**: Attempted to restart the database server remotely; unsuccessful.
- **11:30 AM**: Decision made to switch to a backup database instance.
- **11:45 AM**: Backup database is brought online, and authentication service is pointed to it.
- **12:00 PM**: Services start to recover; login functionality restored.
- **12:15 PM**: Monitoring confirms stability; incident declared resolved.
- **Post-incident**: Root cause analysis initiated.

---

### ## Root Cause

The root cause of the outage was a failure of the primary database server due to a hardware malfunction.

---

### ## Mitigation & Lessons Learned

- **Immediate Mitigation**: Switched to the backup database to restore service quickly.
- **Long-term Actions**:
  - Replace faulty hardware components in the primary database server.
  - Improve monitoring to detect hardware failures earlier.

## # Incident Postmortem

### ## Incident Overview

On October 20, 2023, our service experienced an unexpected outage affecting user login function

## ## Mitigation & Lessons Learned

- **Immediate Mitigation**: Switched to the backup database to restore service quickly.
- **Long-term Actions**:
  - Replace faulty hardware components in the primary database server.
  - Improve monitoring to

## # Incident Postmortem

## ## Incident Overview

On October 20, 2023, our service experienced an unexpected outage affecting user login function

---

## ## Timeline

- **10:15 AM**: Monitoring team detects multiple failed login attempts via monitoring dashboard
- **10:20 AM**: Support team receives reports from users unable to log in. Incident is escalated
- **10:30 AM**: Engineering begins preliminary analysis. Logs indicate database connection error
- **10:45 AM**: Confirmed that the authentication service is failing to connect to the user data
- **11:00 AM**: Investigation reveals that the database server has become unresponsive.
- **11:15 AM**: Attempted to restart the database server remotely; unsuccessful.
- **11:30 AM**: Decision made to switch to a backup database instance.
- **11:45 AM**: Backup database is brought online, and authentication service is pointed to it.
- **12:00 PM**: Services start to recover; login functionality restored.
- **12:15 PM**: Monitoring confirms stability; incident declared resolved.
- **Post-incident**: Root cause analysis initiated.

---

## ## Root Cause

The root cause of the outage was a failure of the primary database server due to a hardware malfunction

---

## ## Mitigation & Lessons Learned

- **Immediate Mitigation**: Switched to the backup database to restore service quickly.
- **Long-term Actions**:
  - Replace faulty hardware components in the primary database server.
  - Improve monitoring to

- **11:45 AM**: Backup database is brought online, and authentication service is pointed to it.
- **12:00 PM**: Services start to recover; login functionality restored.
- **12:15 PM**: Monitoring confirms stability; incident declared resolved.
- **Post-incident**: Root cause analysis initiated.

---

## ## Root Cause

The root cause of the outage was a failure of the primary database server due to a hardware mal

---

## ## Mitigation & Lessons Learned

- **Immediate Mitigation**: Switched to the backup database to restore service quickly.
- **Long-term Actions**:
  - Replace faulty hardware components in the primary database server.
  - Improve monitoring to

## # Incident Postmortem

## ## Incident Overview

On October 20, 2023, our service experienced an unexpected outage affecting user login function

---

## ## Timeline

- **10:15 AM**: Monitoring team detects multiple failed login attempts via monitoring dashboard
- **10:20 AM**: Support team receives reports from users unable to log in. Incident is escalate
- **10:30 AM**: Engineering begins preliminary analysis. Logs indicate database connection erro
- **10:45 AM**: Confirmed that the authentication service is failing to connect to the user dat
- **11:00 AM**: Investigation reveals that the database server has become unresponsive.
- **11:15 AM**: Attempted to restart the database server remotely; unsuccessful.
- **11:30 AM**: Decision made to switch to a backup database instance.
- **11:45 AM**: Backup database is brought online, and authentication service is pointed to it.

- **11:00 AM**: Investigation reveals that the database server has become unresponsive.
- **11:15 AM**: Attempted to restart the database server remotely; unsuccessful.

- **\*\*11:30 AM\*\***: Decision made to switch to a backup database instance.
- **\*\*11:45 AM\*\***: Backup database is brought online, and authentication service is pointed to it.
- **\*\*12:00 PM\*\***: Services start to recover; login functionality restored.
- **\*\*12:15 PM\*\***: Monitoring confirms stability; incident declared resolved.
- **\*\*Post-incident\*\***: Root cause analysis initiated.

---

## ## Root Cause

The root cause of the outage was a failure of the primary database server due to a hardware mal

---

## ## Mitigation & Lessons Learned

- **\*\*Immediate Mitigation\*\***: Switched to the backup database to restore service quickly.
- **\*\*Long-term Actions\*\***:
  - Replace faulty hardware components in the primary database server.
  - Improve monitoring to

## # Incident Postmortem

## ## Incident Overview

On October 20, 2023, our service experienced an unexpected outage affecting user login function

---

## ## Timeline

- **\*\*10:15 AM\*\***: Monitoring team detects multiple failed login attempts via monitoring dashboard
- **\*\*10:20 AM\*\***: Support team receives reports from users unable to log in. Incident is escalate
- **\*\*10:30 AM\*\***: Engineering begins preliminary analysis. Logs indicate database connection erro
- **\*\*10:45 AM\*\***: Confirmed that the authentication service is failing to connect to the user dat
- **\*\*11:00 AM\*\***: Investigation reveals that the database server has become unresponsive.
- **\*\*11:15 AM\*\***: Attempted to restart the database server remotely; unsuccessful.
- **\*\*11:30 AM\*\***: Decision made to switch to a backup database instance.
